

March 5
Periods 1,2,4,6

Periods 1-2 need Mod. 15 packet

Warm Up -

Module 15 packet - read pg. 420, answer #4

Class Work - Partner Work

Pg. 423, #s 5-6

Read pgs. 426-427 (examples 1-2) Answer #s 2-4

Pgs. 429-430, #s 10-16 EVENS only

Quiz on Lessons 15.2-15.3 Wednesday. Be Ready!

Answers to Make-up Quiz begin on next slide.

One point will be added to everyone's make-up quiz before calculating "recorded score".

$$\begin{array}{r} 640 \\ + 256 \\ \hline \end{array}$$

$$896 \text{ in}^2$$

$$A = \frac{1}{2}bh$$

$$\frac{1}{2}(16)(20)$$

$$160 \text{ in}^2 (4)$$

$$\triangle A = 640 \text{ in}^2$$

$$A = s^2$$

$$16^2$$

$$256 \text{ in}^2$$

$$1.) A = bh$$

$$8\text{ft}(3\text{ft})$$

$$A = 24\text{ft}^2$$

$$2.) A = \frac{1}{2}(b_1 + b_2)h$$

$$\frac{1}{2}(8\text{in} + 14\text{in})7\text{in}$$

$$\frac{22\text{in}}{2}(7\text{in})$$

$$11\text{in}(7\text{in}) = 77\text{in}^2$$

$$3.) A = \frac{1}{2}(b_1 + b_2)h$$

$$12052.1\text{m}^2 = \frac{1}{2}(82.4 + 108.6)h$$

$$12,052 = \frac{1}{2}(191)h$$

4) Extra Credit

Trapezoid

$$A = \frac{1}{2}(b_1 + b_2)h$$

$$\frac{1}{2}(21.4 + 30.5)10.1$$

$$\underline{(51.9)10.1}$$

$$\overset{2}{A = 262.095}$$

Rhombus

$$A = \frac{(d_1)(d_2)}{2}$$

$$\underline{(36.98)}$$

$$262.095$$

$$- \underline{36.95}$$

$$\boxed{225.145 \text{ ft}^2}$$

5)

$$2(5 \cdot 20) = 200 \quad \text{L/R}$$

$$2(5 \cdot 30) = 300 \quad \text{F/B}$$

$$20 \cdot 30 = \underline{600} \quad \text{Bottom only}$$

$$A = 1100 \text{ in}^2$$

6) Both are correct.

Addition is Commutative

$$(24 + 16) = (16 + 24)$$

7) $5 \cdot 2 = 10$

$$3 \cdot 5 = 15$$

$$2 \cdot 5 = 10$$

35 in^2

14)

$$\text{Density} = \frac{\text{mass}}{\text{volume}}$$

$$19.3 \text{ gm} \quad \frac{\text{mass}}{200 \text{ cm}^3}$$

$$200(19.3 \text{ gm/cm}^3) = \text{mass}$$

March 5, 2019
Period 5

Warm Up - pg. 284

Class Work -

Pg. 286: Read review of Module 10, make sure you know the definitions of the terms on pg. 286

Pg. 287 #s 1-17

This will be graded for an accuracy grade tomorrow and will be used to study from for **test on Module 10 this Friday**.

$$S - 5t + S^2$$

$$4 - (5 \cdot -1) + 4^2$$

$$4 - (-5) + 16$$

$$4 + 5 + 16$$

$$9 + 16 = 25$$

$$S = 4$$

$$t = -1$$

P

E

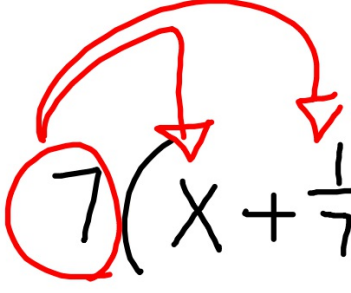

MD

AS

$$7 + 7x = 7(x + \frac{1}{7})$$

$7x + (7 \cdot \frac{1}{7})$
 $7x + 1$

$7 + 7x$

$$A = \frac{1}{2} (b_1 + b_2) h$$

$$\frac{1}{2} (4 + 6) (8)$$

$$\frac{1}{2} 10 (8)$$

$$\frac{10(8)}{2} = \frac{80}{2} = 40$$
